Summary

B.Tech Computer Science (AI) student with strong foundations in Data Structures, Algorithms, and full-stack web development. Experienced in building Django and React applications, REST APIs, and database-driven systems. Actively contributes to open source and enjoys building clean, maintainable products.

Education

Vishwakarma Institute of Technology, Pune

2023 – 2027

B.Tech in Computer Science and Engineering (Artificial Intelligence)

CGPA – 9.1

Experience

Software Engineering Intern | *PGTechLabs* | *Remote, Munich, Germany* | *Vue 3, TypeScript, Node.js, SQLite* | **December '25 – Feb '26**

- Built and maintained features using Vue 3, TypeScript, Node.js, SQLite & Docker for a healthcare web application.
- Refactored legacy UI and state management logic by fixing component lifecycle and data-flow issues, ensuring patient information remains consistent across navigation and views.
- Performance Optimization:** Eliminated redundant API calls and implemented "hot-reload" style state management, significantly reducing UI latency when switching between user contexts.

Data Science Intern | *Cognify Technologies* | *Remote* | *Python, Pandas, NumPy, Scikit-Learn, Matplotlib, Jupyter* | **May '24 - Jun 2024**

- Implemented engineering principles to preprocess and model datasets, boosting ML accuracy by 15%.
- Automated data cleaning in Python, cutting processing time 30%.
- Collaborated in a team environment, applying best practices for reliable deployment.

Web Domain Head | *ISA VIT Pune Student Section* |

July '24 – May '25

Open Source Head | *Team Quark*

July '24 – May '25

Projects

AI-Driven Finance Platform | *Next.js, Supabase (PostgreSQL), Prisma, Clerk, Arcjet, Inngest, Gemini* | [Link](#) | [Demo](#)

- Built a secure, production-ready finance platform with real-time expense tracking, budgeting, and interactive dashboards for spending insights and financial planning.
- Implemented **Clerk authentication** and Arcjet application-layer **security** for bot/spam filtering, email validation, and **rate-limiting**, ensuring abuse prevention and supporting **tier-based SaaS** subscription controls.

gop2pfs | **Decentralized Peer-to-Peer File Sharing System** | *Go, TCP, AES, Gob*

- Crafted a serverless, decentralized file sharing platform in Go, enabling direct P2P file transfers over TCP without a central coordinator. Adopted AES encryption for files at rest and in transit; enabled concurrent, encrypted streaming.
- Conceptualized a modular, extensible system with TCP transport, Gob-based message encoding, configurable storage, and efficient message routing across distributed nodes

AI-Powered EdTech Platform with RAG for Personalization | *RAG, LLM, FAISS, Gemini, LangChain, Streamlit* | [Link](#)

- Built a multi-module AI learning system including an AI tutor, adaptive quiz generator, personalized roadmap creator, PDF & video summarizers, and YouTube transcript assistant, supporting end-to-end learning personalization.
- Designed **RAG-based pipelines** for semantic search, content summarization, knowledge extraction, and real-time doubt-solving using **Gemini + LangChain + FAISS**, enabling intelligent learning assistance workflows.

Rusty Chat – Real-time Chat Application | *Rust, WebSockets, Warp, React*

- Built a full-stack real-time chat system in Rust using Warp and WebSockets, enabling private messaging, online status, last-seen tracking, and instant delivery across multiple clients.
- Implemented secure authentication and persistent message storage with a structured backend architecture, allowing users to access complete chat history and ensuring reliable, low-latency communication.

Vehicle Management System – Java Swing GUI Application | *Java, Swing (WindowBuilder), OOP, MVC Pattern* | [Link](#)

- Built a full-stack real-time chat system in Rust using Warp and WebSockets, enabling private messaging, online status, last-seen tracking, and instant delivery across multiple clients.
- Implemented login/signup, vehicle listing, purchase request handling, and admin control features using JPanels, JTables, and object inheritance without persistent storage.

Technical Skills

Web & Cloud: Django, React.js, Next.js, Node.js, REST APIs, MySQL, PostgreSQL, Flask, Express.js, Docker, Firebase, MongoDB, GCP, Vercel, Heroku, Postman

Programming Languages: Python, Java, C/C++, JavaScript, TypeScript, SQL, R, Rust, Go

AI / ML & Data Science: NumPy, Pandas, Scikit-Learn, TensorFlow, PyTorch, Keras, OpenCV, YOLO, Hugging Face Transformers, LangChain, RAG, Generative AI, GANs, AI Agents, Matplotlib, Seaborn

Coursework: Data Structures & Algorithms, Operating Systems, Computer Networks, DBMS, OOP, Artificial Intelligence, Data Visualization, IoT, Robotics, Problem Solving & Programming

Tools & Dev Practices: Git, GitHub, Linux, Shell Scripting, CI/CD (basic), Jupyter Notebook, Google Colab

Achievements

- **Top 11/497 teams** in Internal SIH at VIT
- **SIH 2024 Finalist (Dec 2024)**
- **4x Hackathon Winner**
- **230+ Days** on LeetCode & 100+ On CodeChef
- Top (13.4%) @LeetCode Max (1,696)
- **1000+ questions solved** on Leetcode & Other Platforms
- Contributor @GSSoC'2024 & 2025 Open Source Event
